FOR BUSINESSES THAT BUY, KEEP STOCK AND SELL

AllMight ERP

Trading businesses

by computerization4u

For the whole business

Everything that comes in and goes out in one program: the customer’s order, the goods from the supplier, the purchase invoice, the payment. You know what you owe and to whom, what is coming in, and where every device went, by its serial number.

Sales reps

Orders on the tablet, even offline, with each customer’s prices, and the CRM with their deals.

The warehouse

Goods in by scanning, order picking, lots, serial numbers, stock counts.

The office

Purchase invoices with a photo, payments, what you owe, and the month in Excel for the accountant.

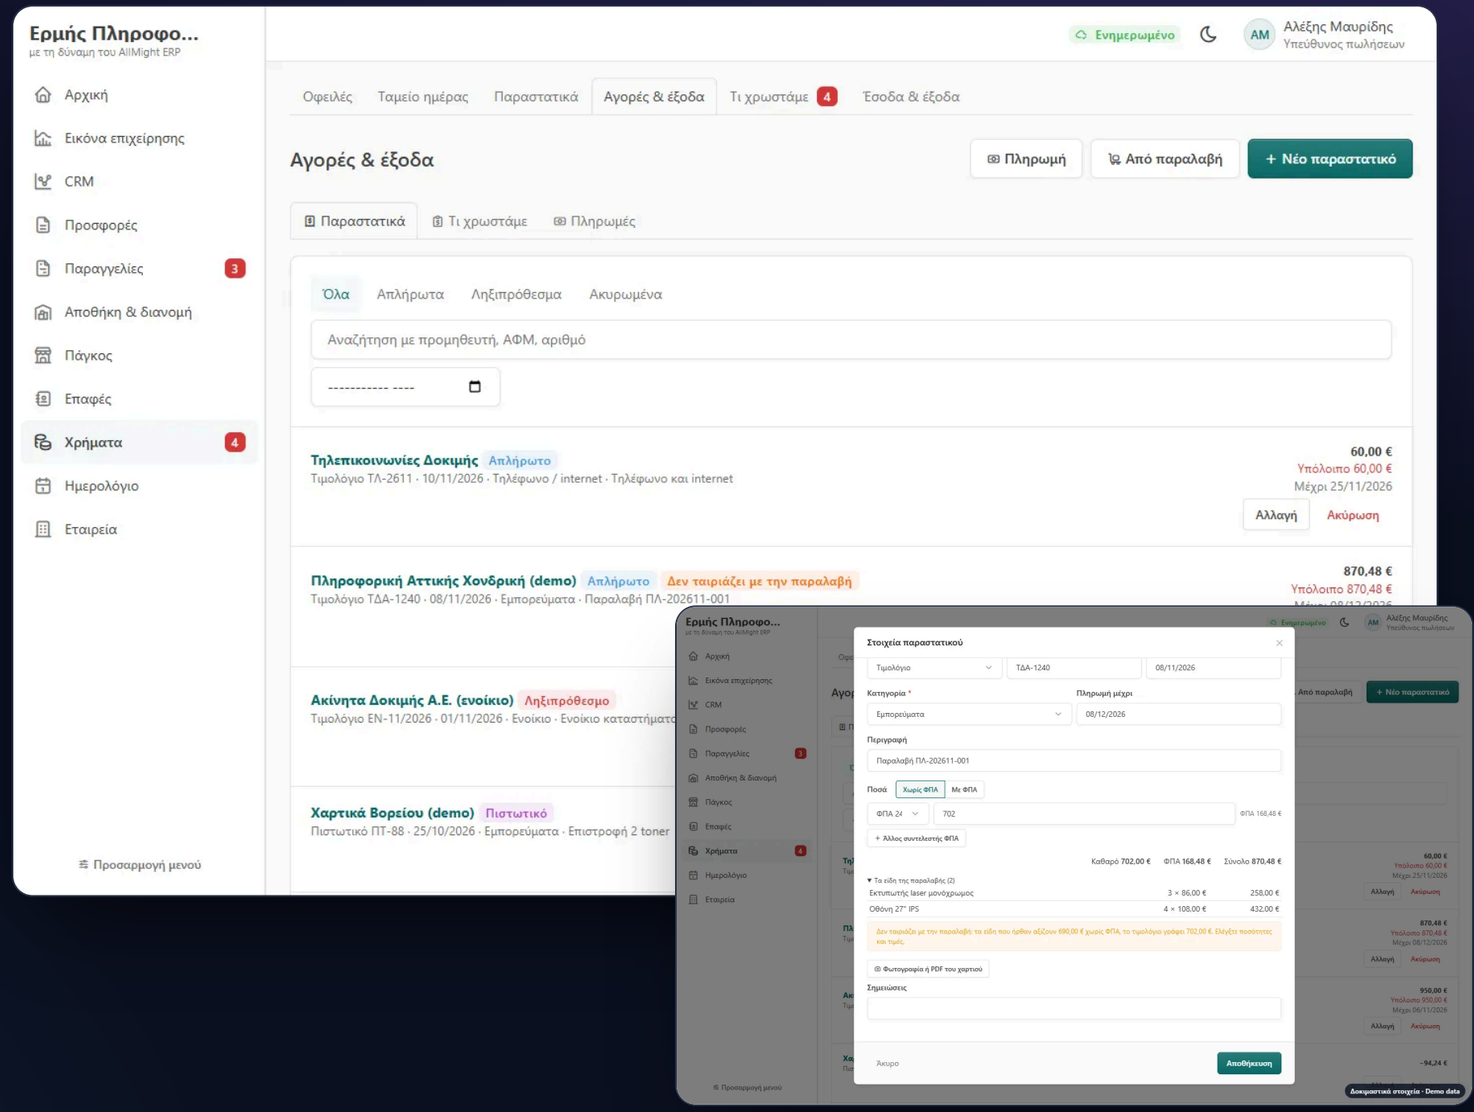

The owner

Income and expenses per month, what comes in and goes out in the next 30 days.

Purchases and expenses

Suppliers' invoices, receipts and credit notes in one list, with a photo or PDF of the paper from the phone. Amounts are typed with or without VAT and the VAT works itself out. From goods received in the warehouse the purchase invoice opens ready, and if it does not match what arrived, the program tells you.

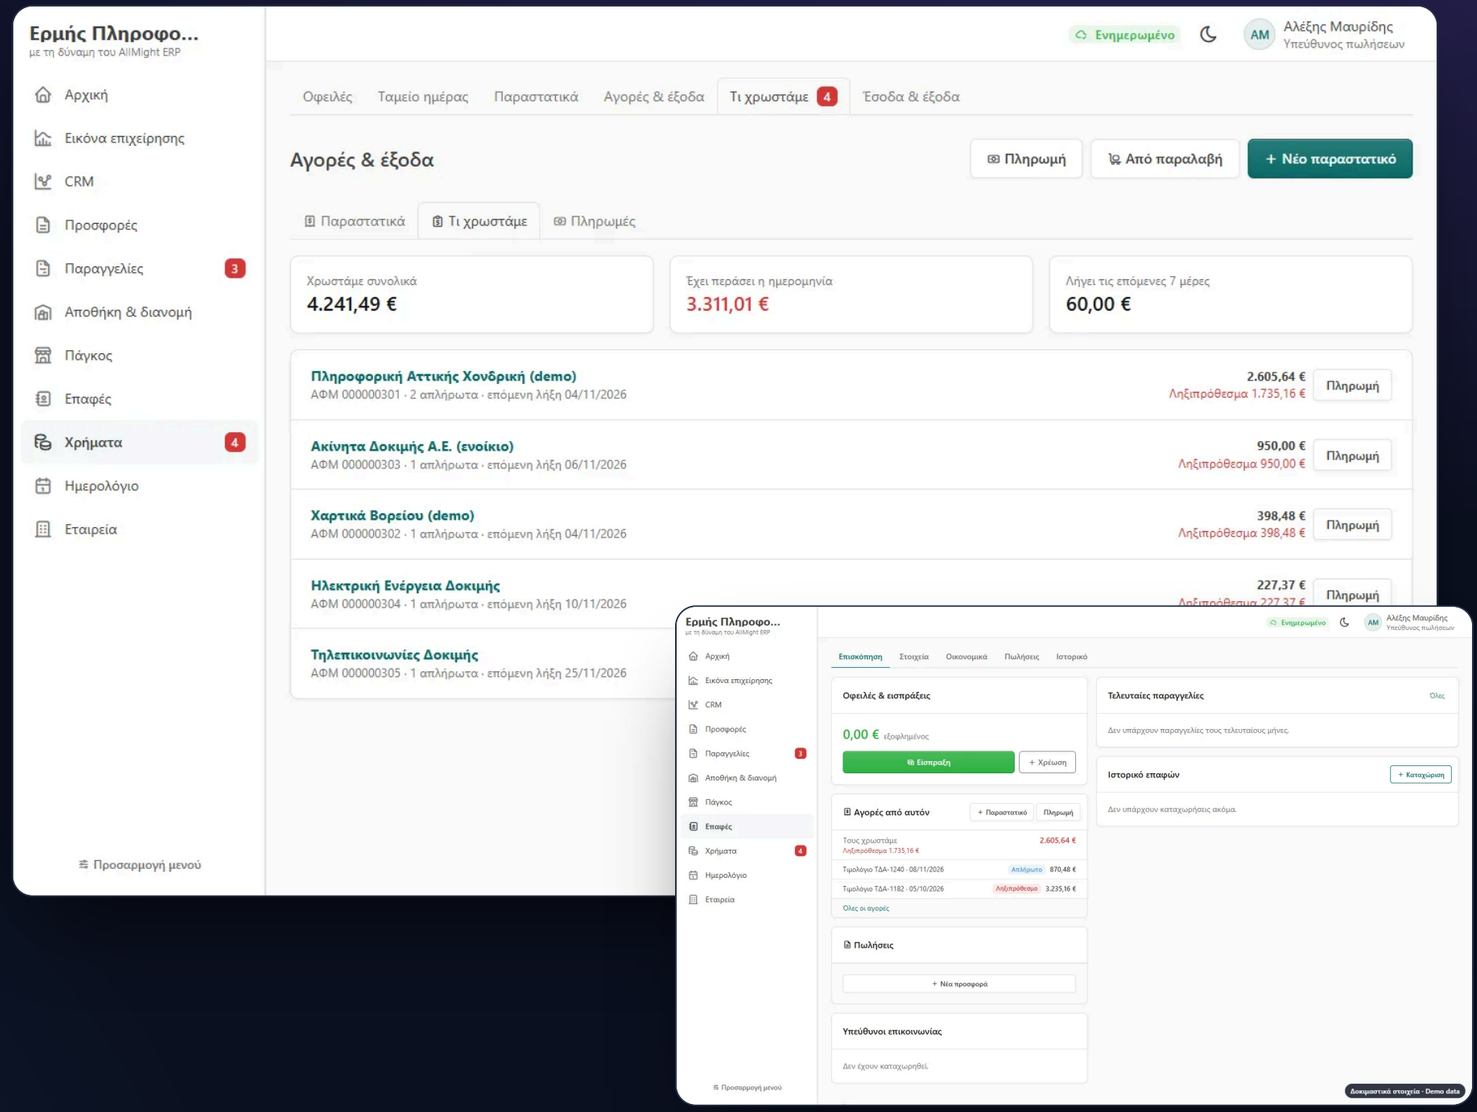

- ✓ Kinds of expense: goods, rent, power, phone, fuel…
- ✓ The same invoice cannot be entered twice
- ✓ «Does not match the receipt» when a price or quantity differs
- ✓ Each receipt is invoiced once

What we owe

For each supplier, what you owe, what is overdue and what falls due this week. A payment settles the oldest unpaid papers first, so nobody has to find which invoice it was for. The supplier is the same card as your customers: if they also buy from you, you see both together.

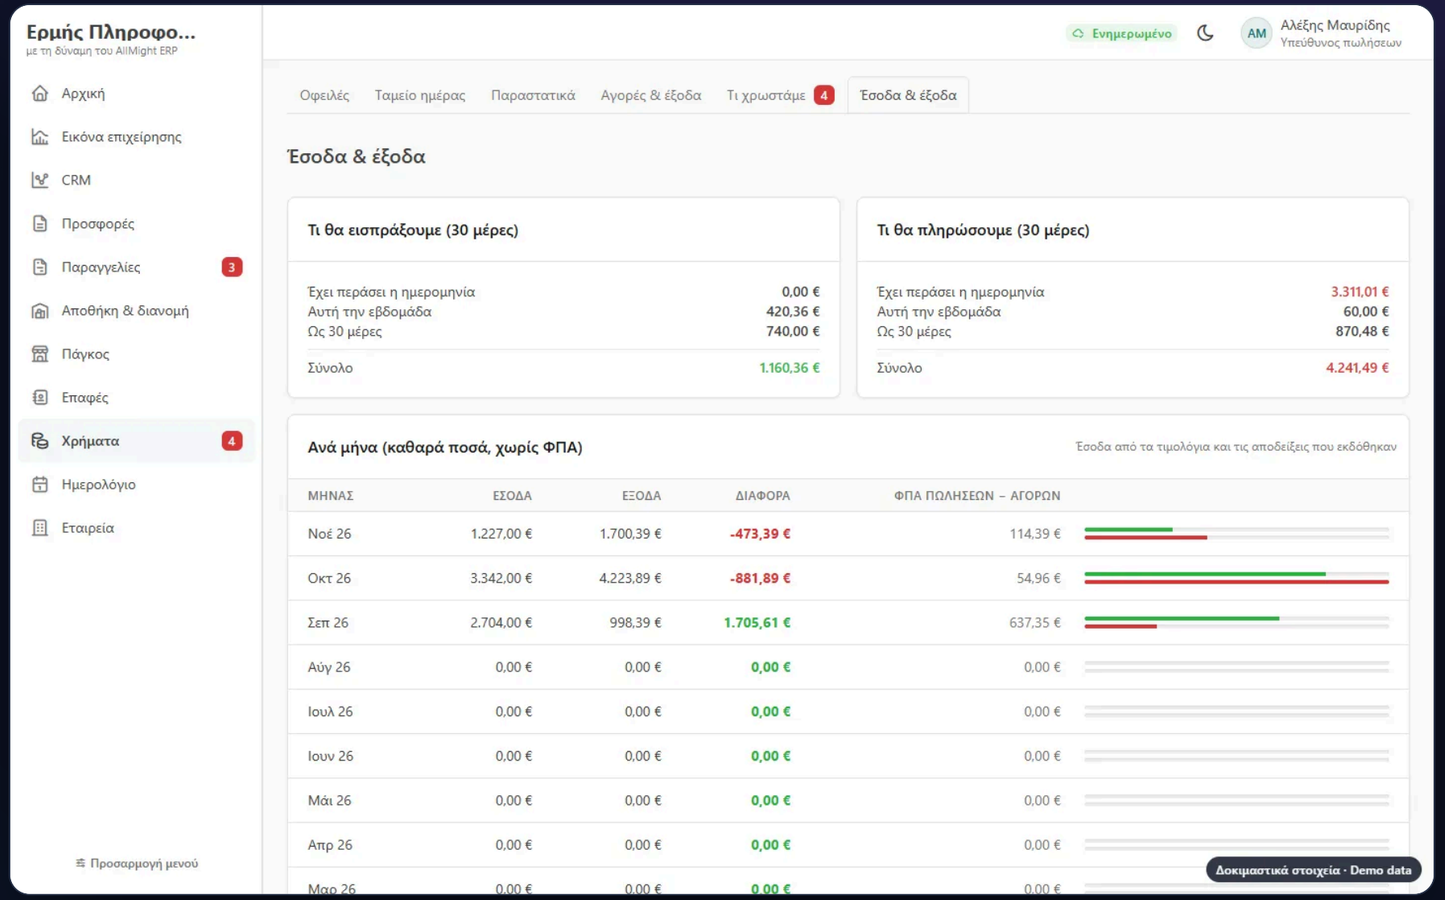

- ✓ A number beside the menu for what is overdue
- ✓ Payments in cash, by bank, card or cheque
- ✓ Cash payments show in the day’s takings

The month at a glance

Income and expenses for each month of the last year, the difference, and the VAT of sales and purchases. Next to it, what you will collect and pay in the next 30 days. The month for your accountant downloads as Excel, or as one file with every photo of the papers.

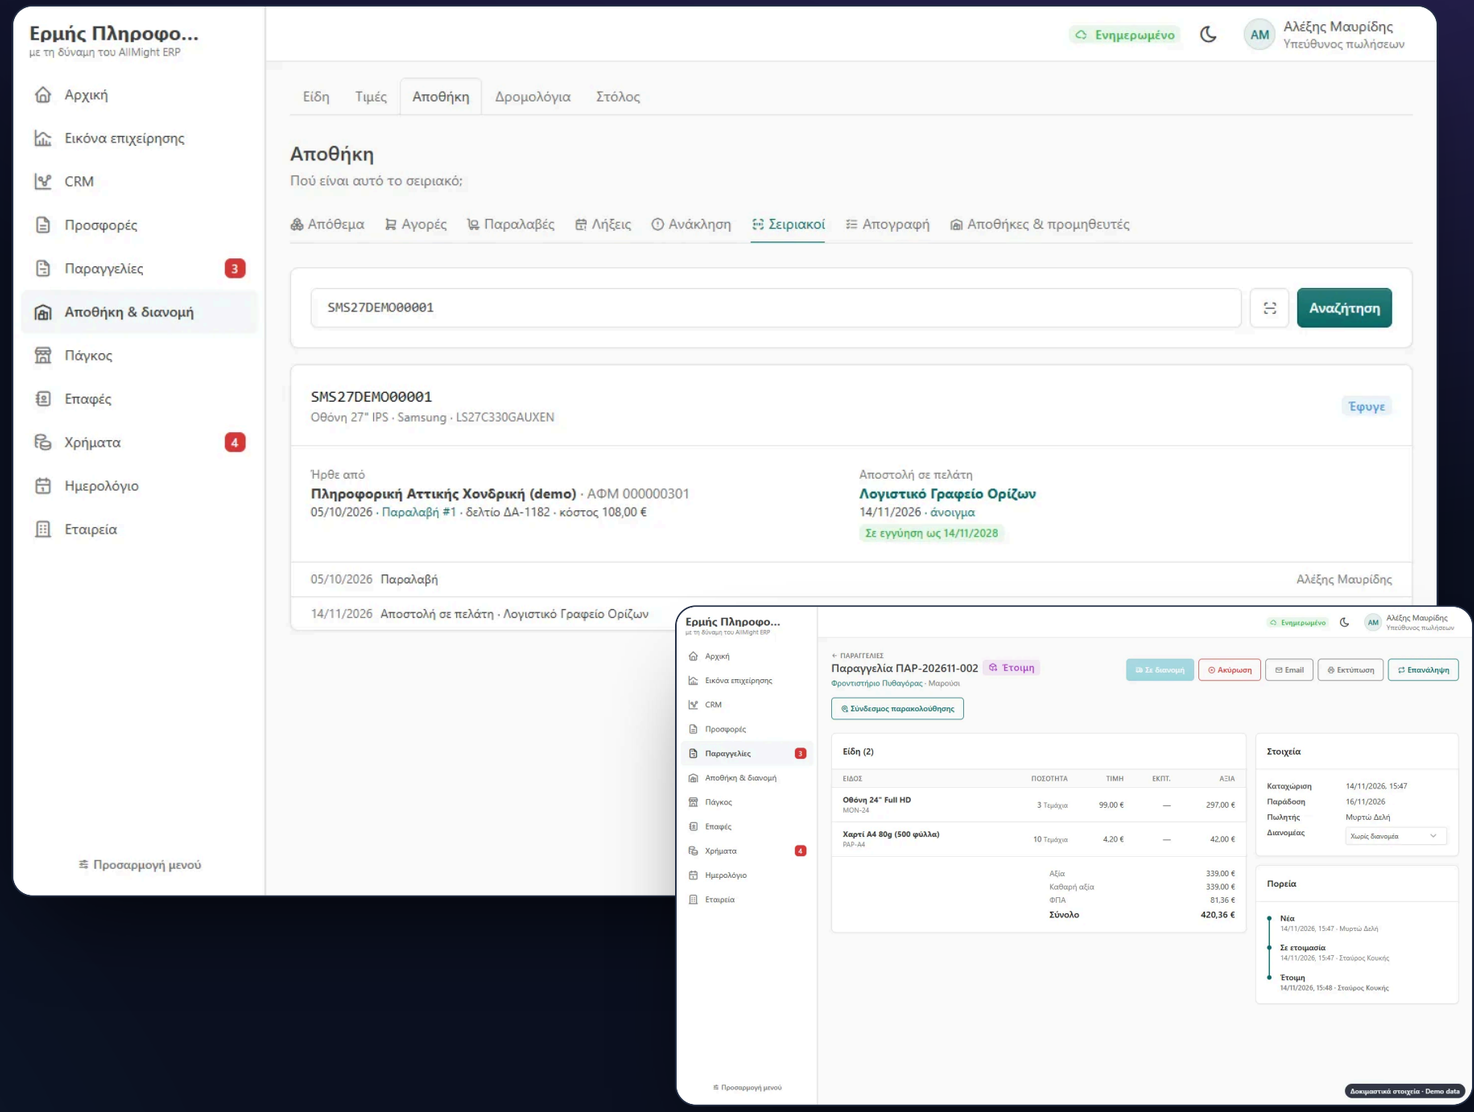

- ✓ Income from the invoices issued
- ✓ The VAT is indicative: the accountant files the return
- ✓ Bookkeeping and payroll stay with your accountant

Serial numbers and warranty

Each item has its maker and the maker's part number. For the items you choose, the program keeps the serial number of every piece: who it came from, who it was sold to and until when it is under warranty. Serials are scanned at goods in and when the order leaves, required or later, as you set per item.

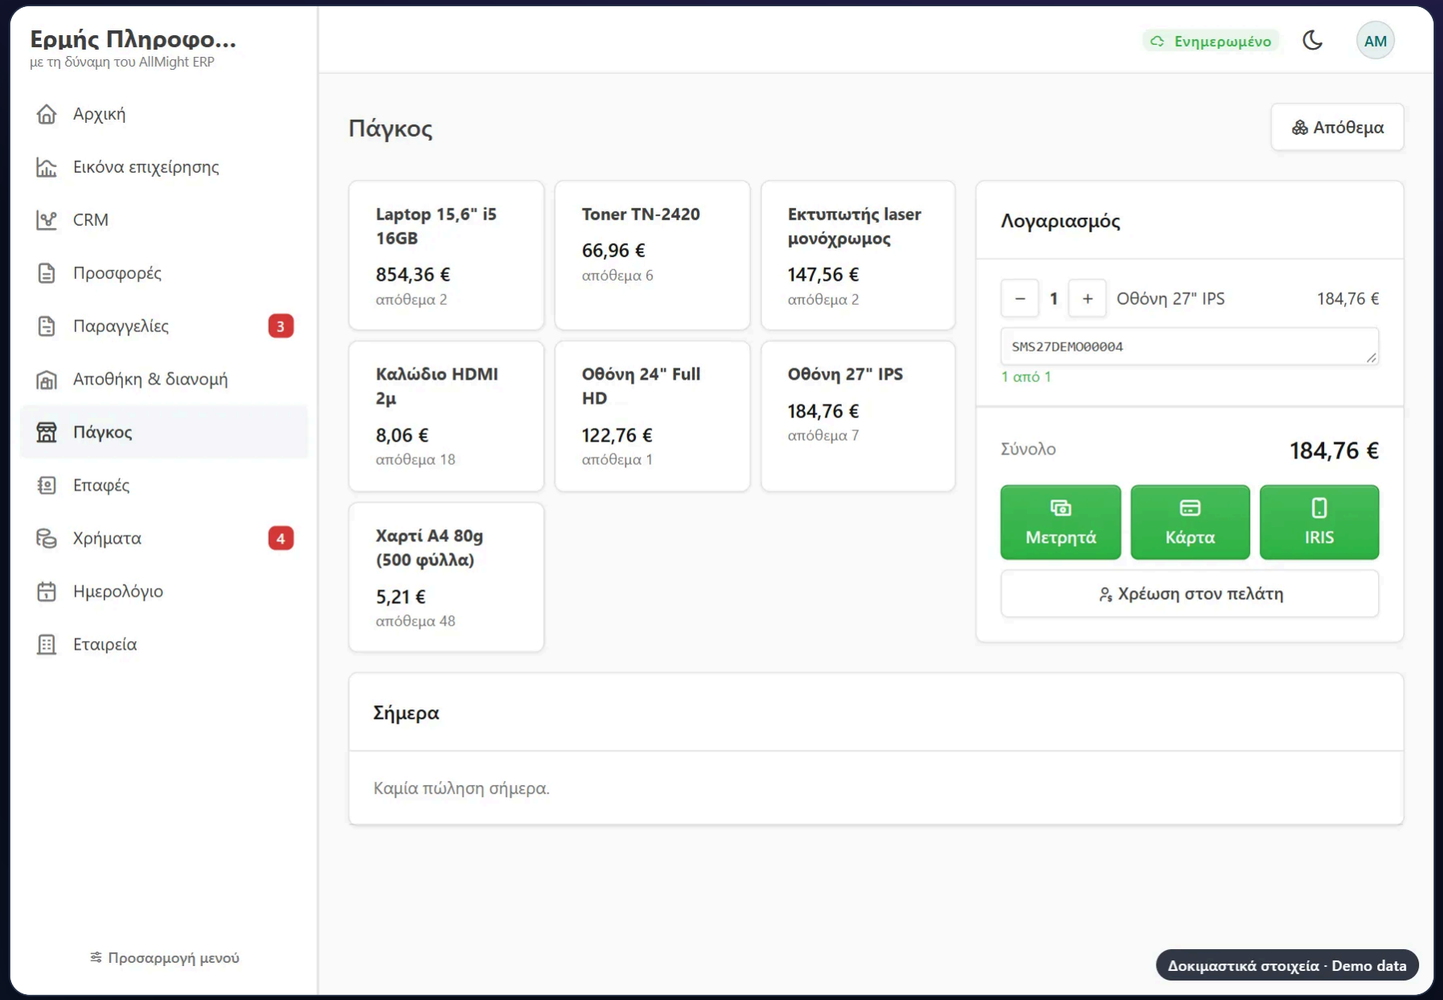

- ✓ «Where is this serial?» with its whole story
- ✓ On the customer's card: the devices they got, with the warranty
- ✓ With AllMight Service: «sold by us, under warranty until…» when it comes in for repair
- ✓ Cancelled or returned: the serial goes back to stock

Retail counter

Sales from the same stock, with big buttons for a tablet. Items with serial numbers ask for a scan in the basket. Cash, card, IRIS or on account.

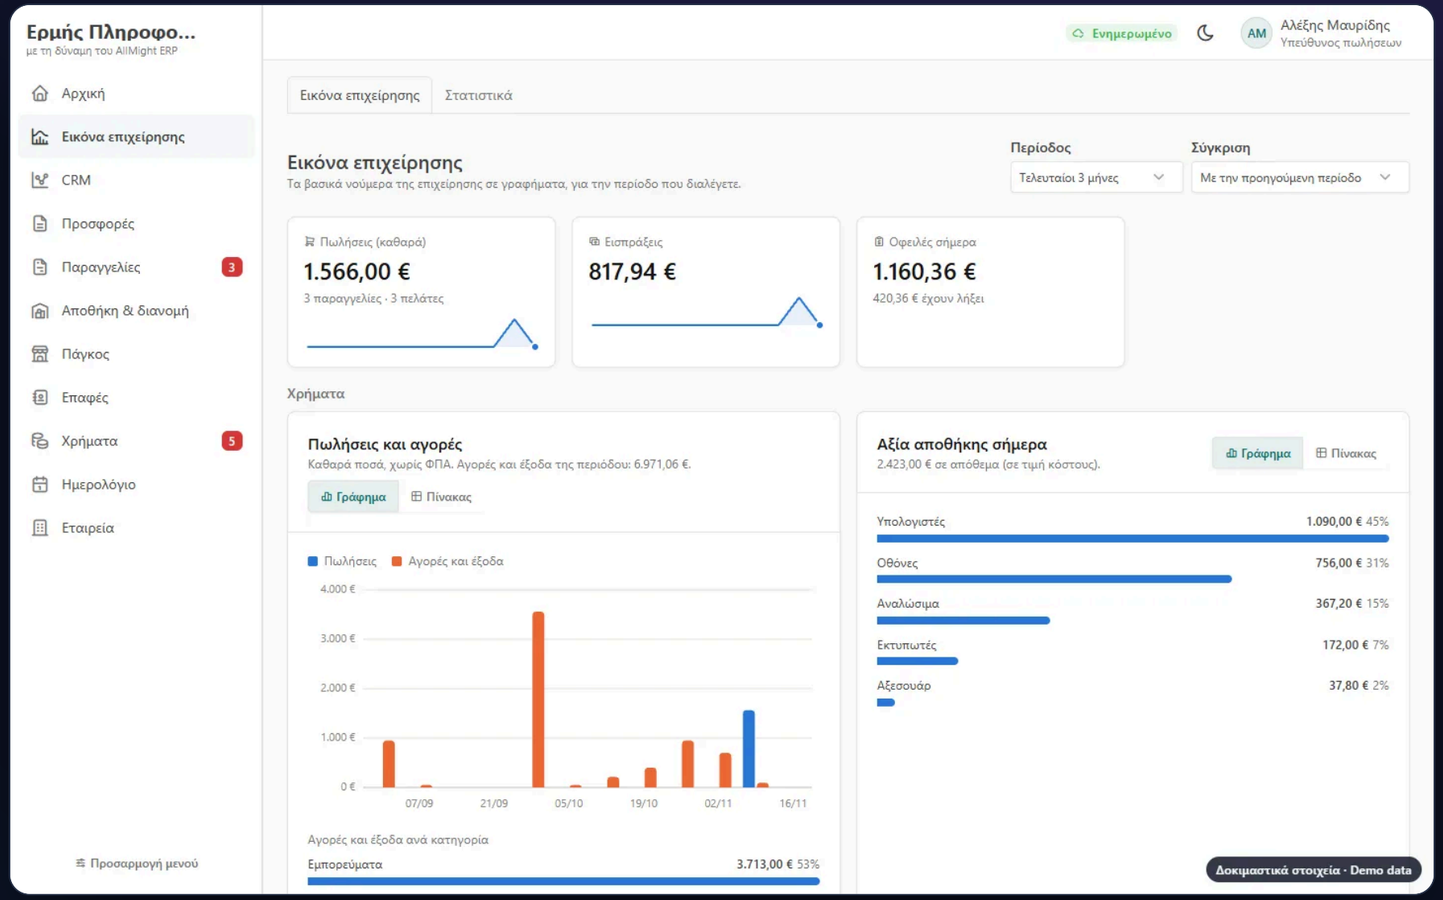

- ✓ One stock for wholesale and the counter
- ✓ Works offline too, and sends the sales later

The business at a glance

Sales and purchases side by side each month, purchases and expenses by category, stock value today, quotes and leads, as charts.

- ✓ Net amounts, before VAT
- ✓ Money in by month and what it paid for, money owed by how late
- ✓ Every chart also as a table, compared with the period before or last year

And also

Roles

Sales reps, warehouse, managers: each sees what they need. Purchases are for managers only.

With the AllMight suite

One card for every customer or supplier, shared payments, a calendar and e-invoicing.

Photos

The supplier’s paper from the phone, made smaller before it is sent.

No signal needed

Reps take orders and the counter sells without a connection.

Your accountant

Gets clean data every month; bookkeeping, tax returns and payroll stay with them.

Nothing to install

Opens in the browser on a computer, tablet or phone.

Let’s see it with your items

A demonstration, your own items and suppliers, and a trial period.

- ✓ Monthly subscription
- ✓ Works on computer, tablet and phone
- ✓ Nothing to install, it opens in the browser
