FOR OLIVE MILLS, SMALL AND LARGE

AllMight Olive Mill

From the scale to the settlement

by computerization4u

For the whole mill

Who brought how many olives, in which order they are milled, how much oil came out and at what yield, what the mill kept as its toll, what each producer owes and what they keep in storage. At the end of the season, the totals and an Excel file for the accountant.

The scale

Writes the weigh ticket in half a minute, even for a new producer, and prints the intake receipt.

The mill floor

Sees the queue, starts the milling, writes oil, acidity and pomace.

The manager

Sets toll and fees, collects, buys oil and settles with producers.

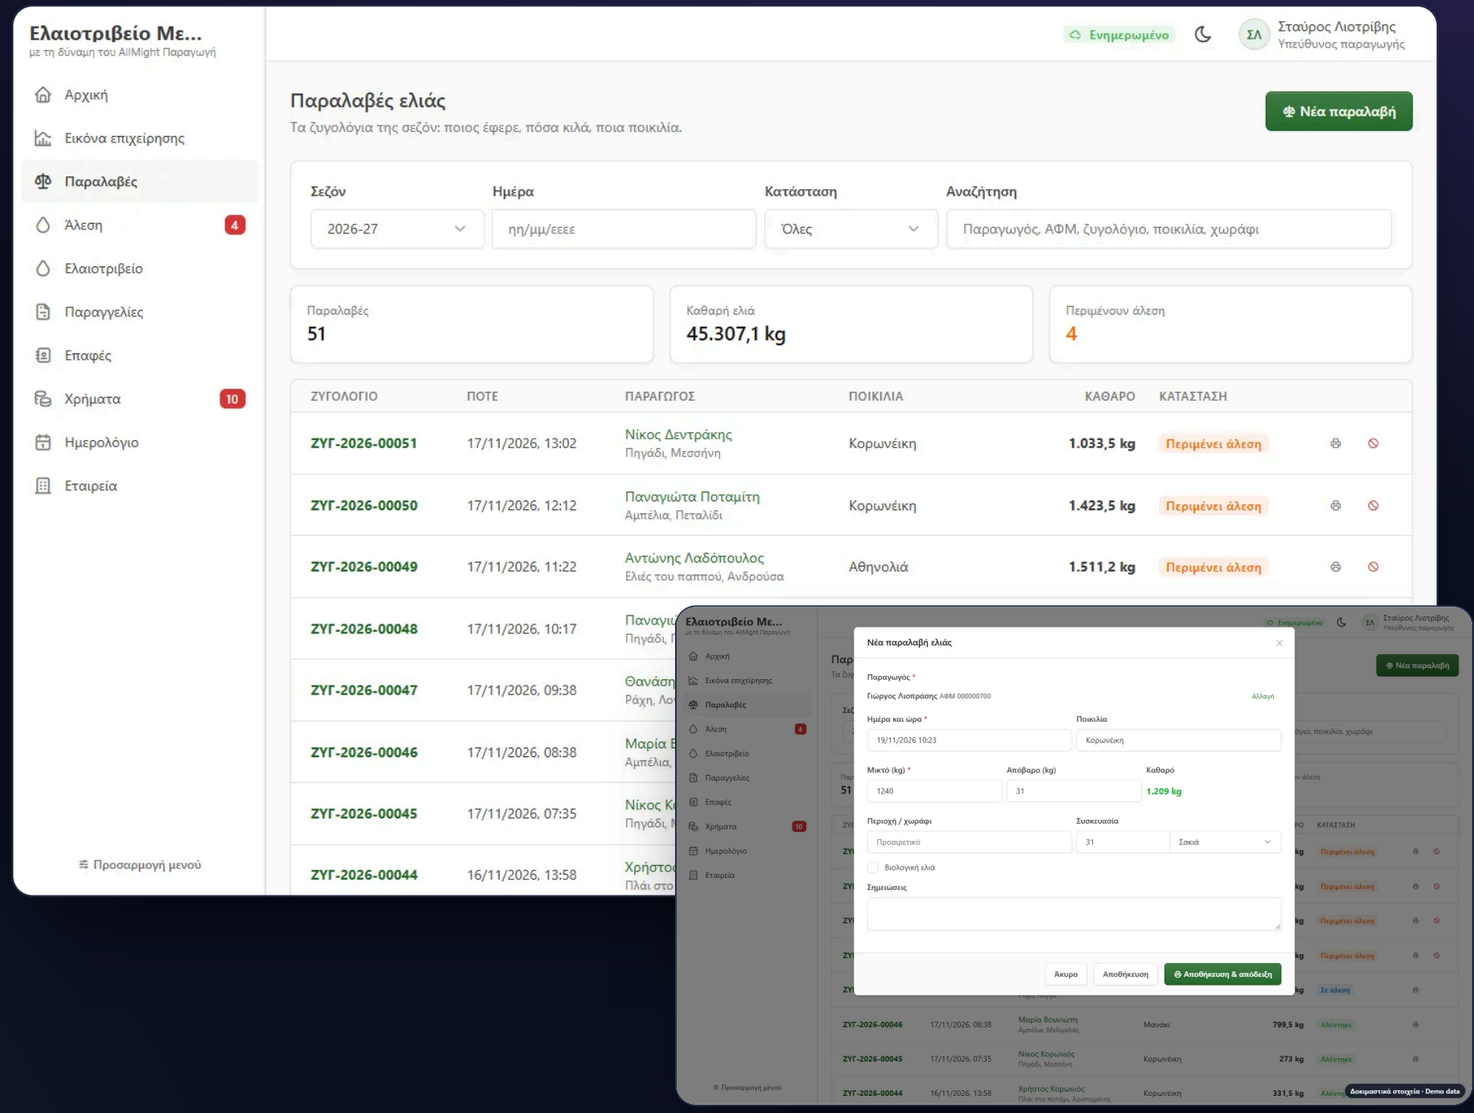

The owner

Yield per producer, variety and area, oil in storage, what is owed.

Olive intake with a weigh ticket

Find the producer by name, tax number or phone, or write a new one on the spot. Gross and tare, and the net works itself out. Variety, field, sacks or crates, organic. The ticket gets a number and an intake receipt is printed for the producer.

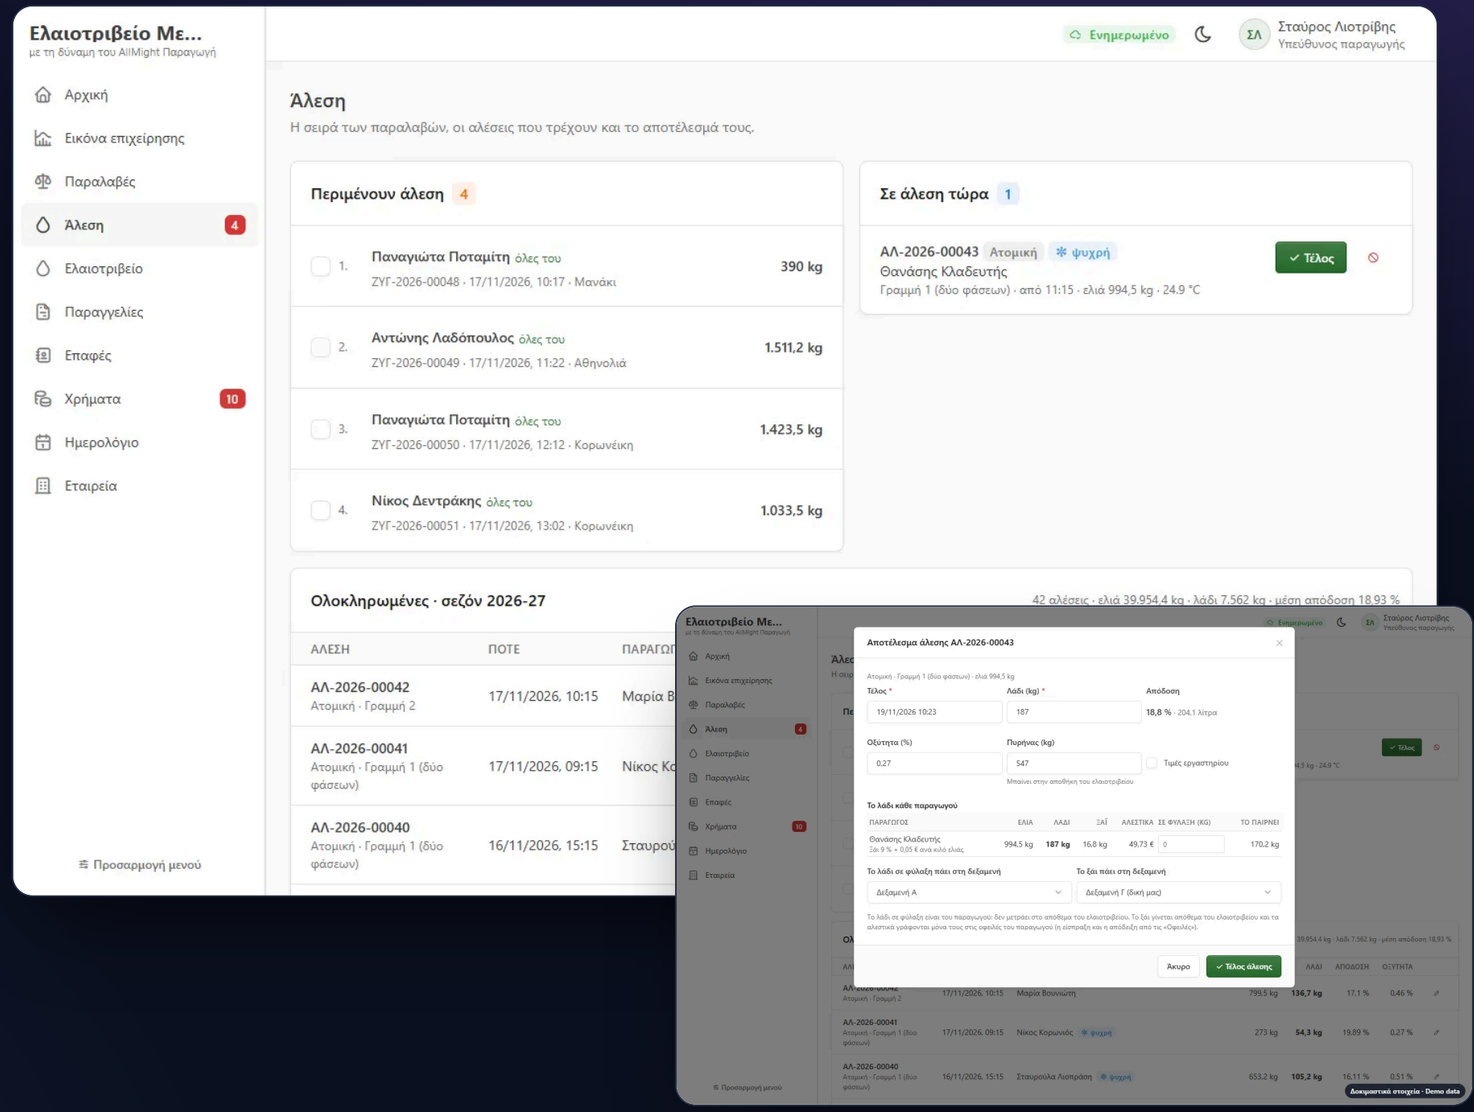

- ✓ Ticket numbers in the shape you want
- ✓ The olives stay the producer's until milled
- ✓ All their intakes on their card

Queue and milling, individual or group

Intakes wait in the order they came. Tick one producer's for an individual milling, or small lots of several for a group one: the oil is shared by the kilos of olives. Line, malaxing temperature with a «cold extraction» flag, water. At the end: oil in kilos and litres, yield, acidity and lab values, pomace.

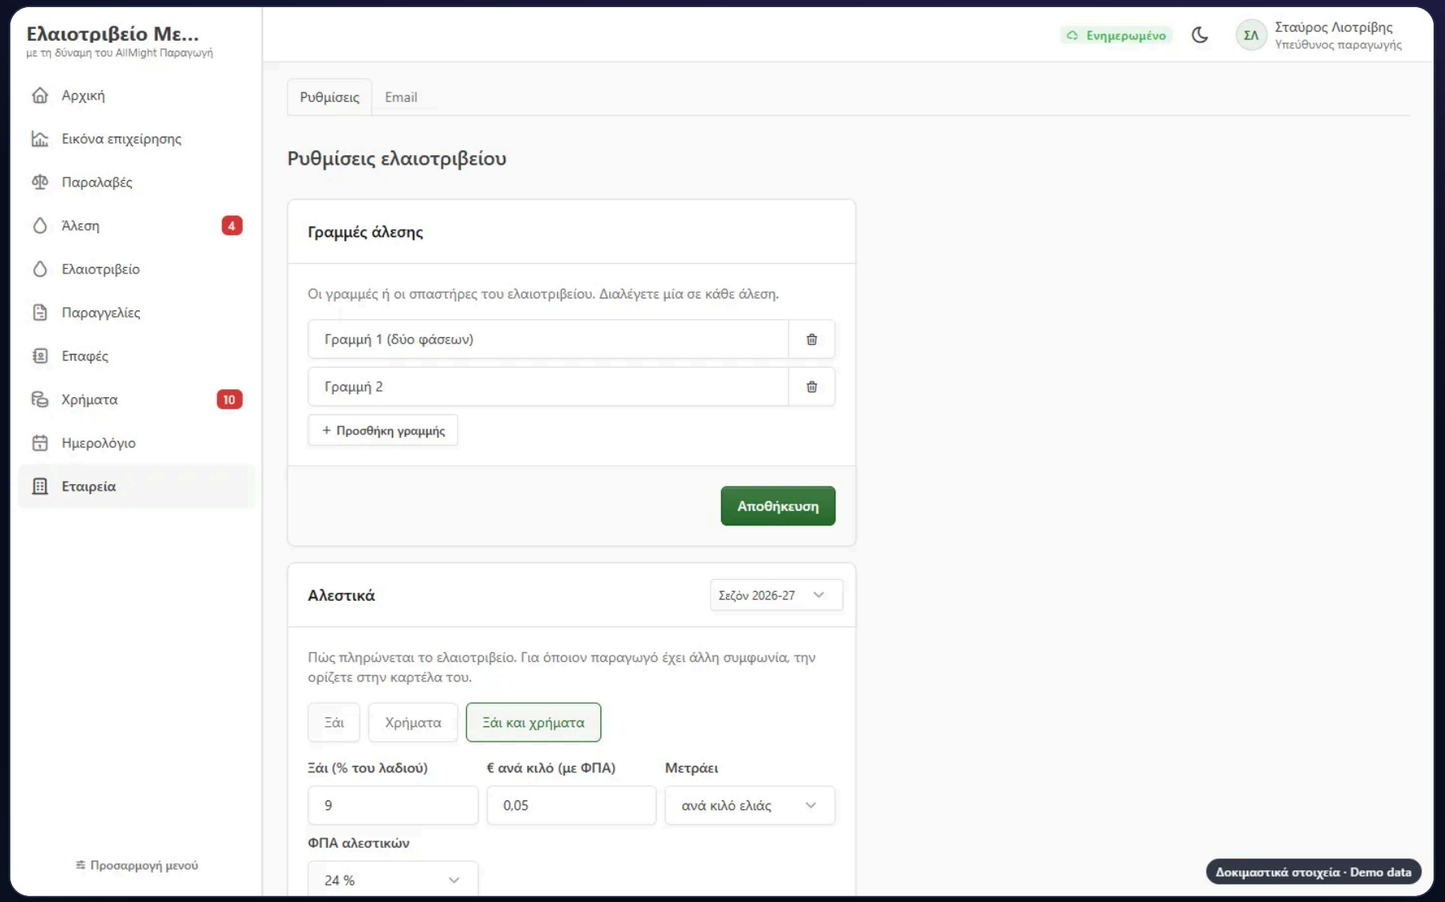

- ✓ Pomace goes into the mill's own stock
- ✓ Per producer: oil, toll, fees, what they take and what stays in storage
- ✓ A number in the menu for the intakes waiting

Toll or milling fees

Set for each season how the mill is paid: a toll (a share of the oil), money per kilo of olives or of oil, or both. A producer with another deal gets it on their card. The toll becomes the mill's stock; fees go to the producer's account by themselves, collected with a receipt at the desk.

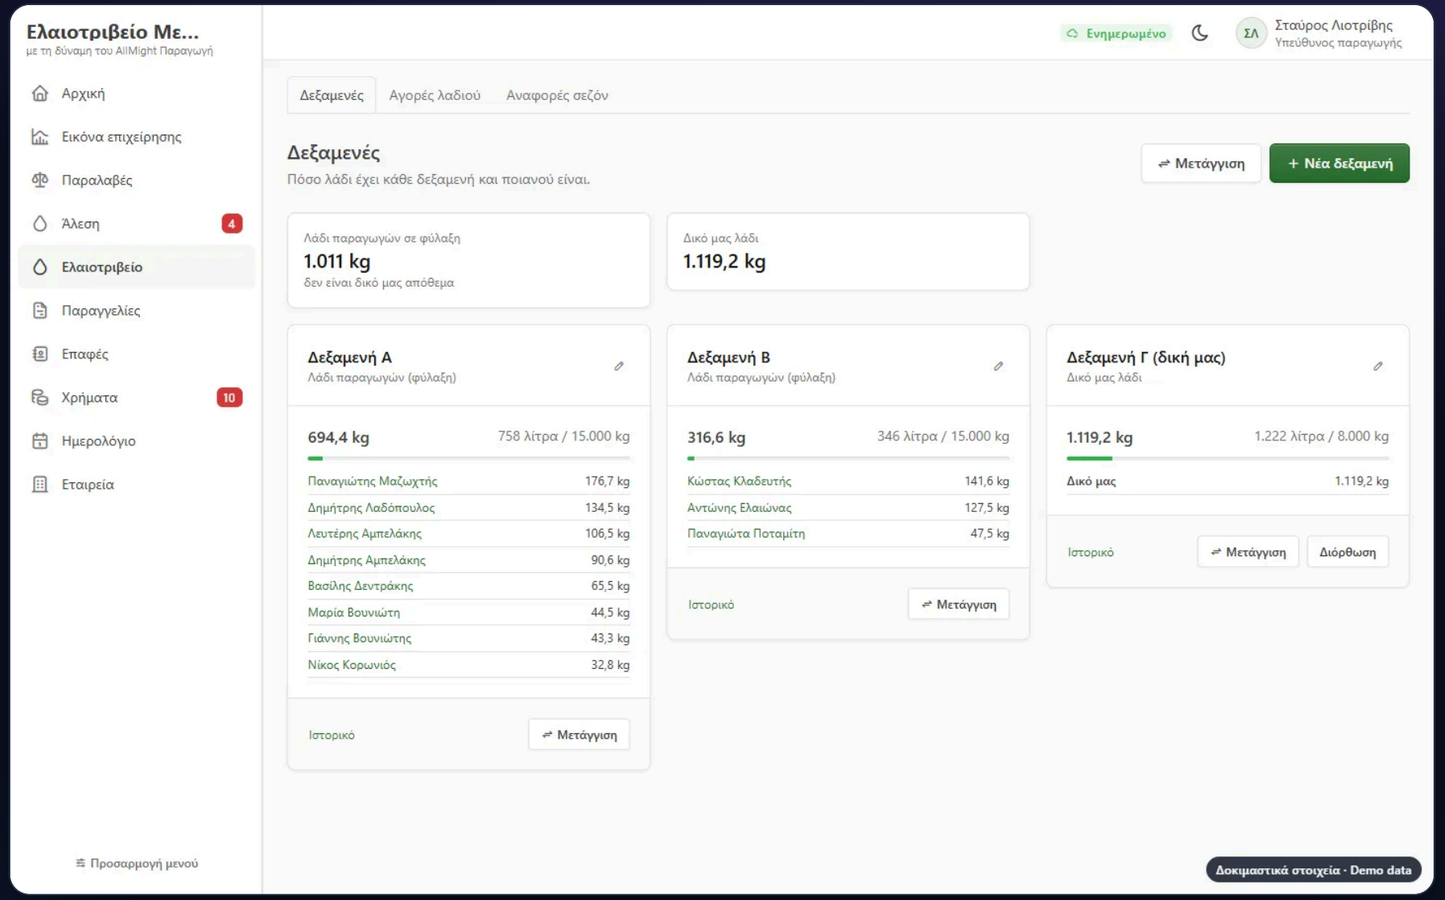

- ✓ myDATA e-receipts as an add-on
- ✓ Oil purchase prices by acidity

Tanks and oil in storage

Each tank holds producers' oil in storage or your own, and shows how much (kilos and litres) and whose. Producers' oil never counts in your stock. Transfers between tanks, and a history: which millings filled it.

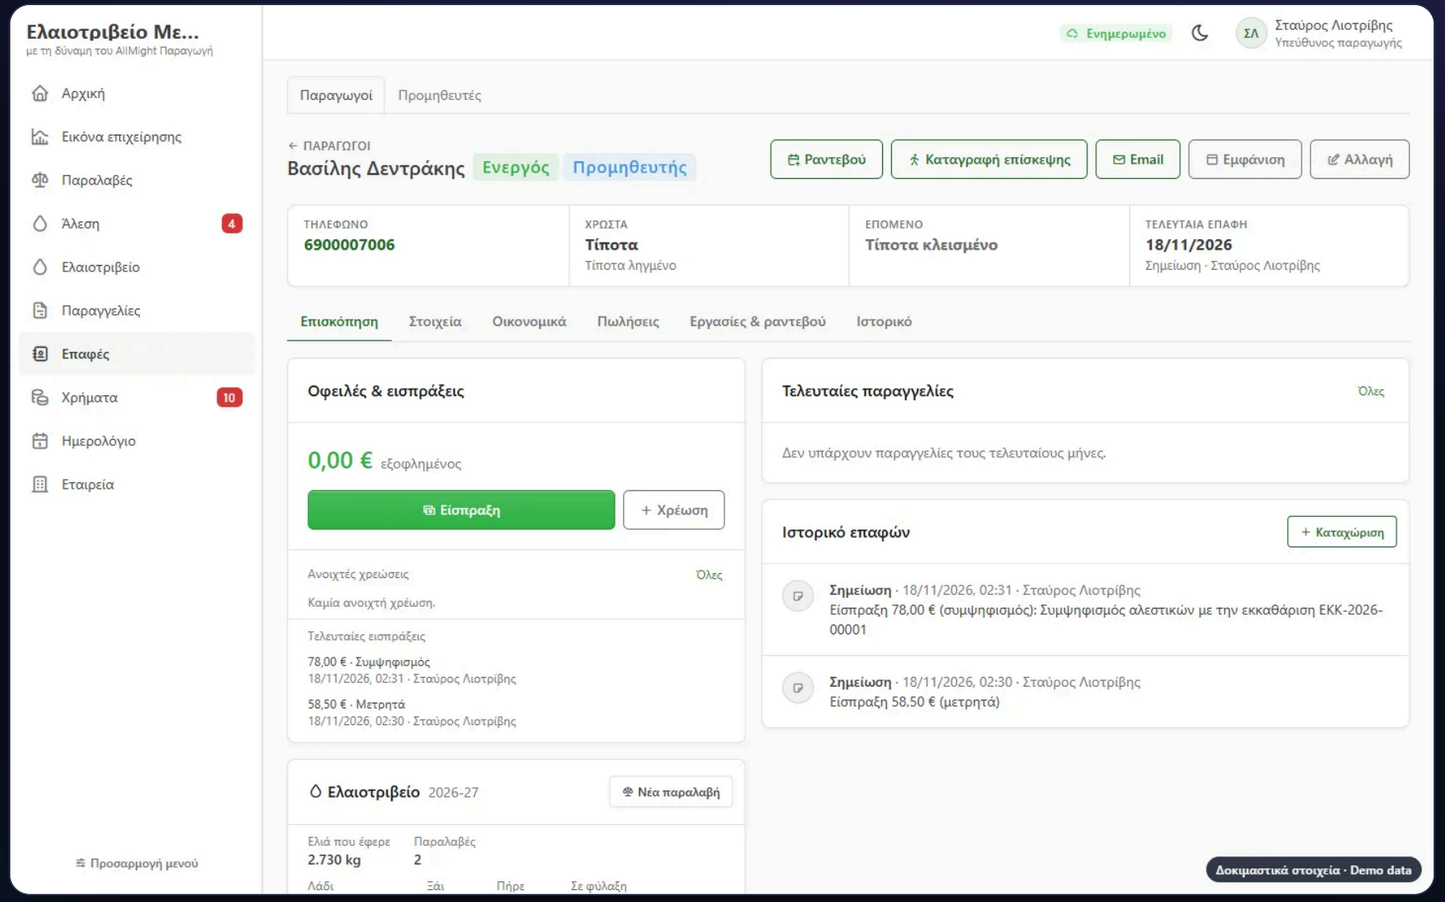

- ✓ Oil handed back from storage whenever the producer comes
- ✓ Capacity checked

Everything about a producer on one card

The olives they brought, the oil and its yield, the toll, what they took, what they keep in storage and what they owe. From here: new intake, oil handed back, oil bought, settlement.

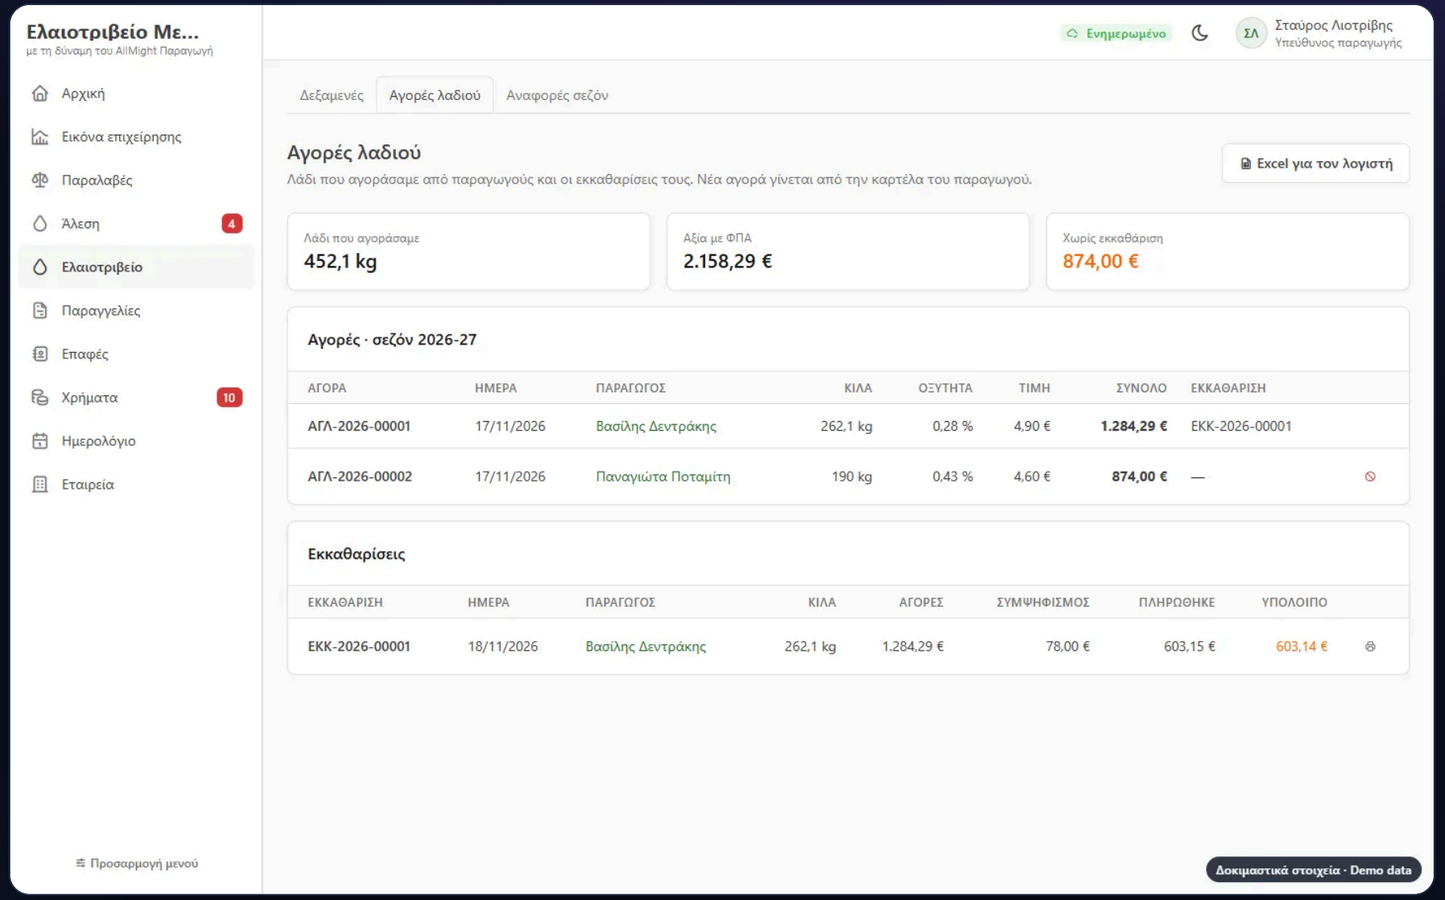

- ✓ Their own fee terms, if any
- ✓ Their payments and debts beside

Buying oil and settling with producers

Buy oil out of a producer's storage at a price from the acidity scale. The oil becomes your stock and the purchase goes into «Purchases & expenses». The settlement prints as a PDF: purchases, minus the fees they owe (if you want), minus advances, and what you pay.

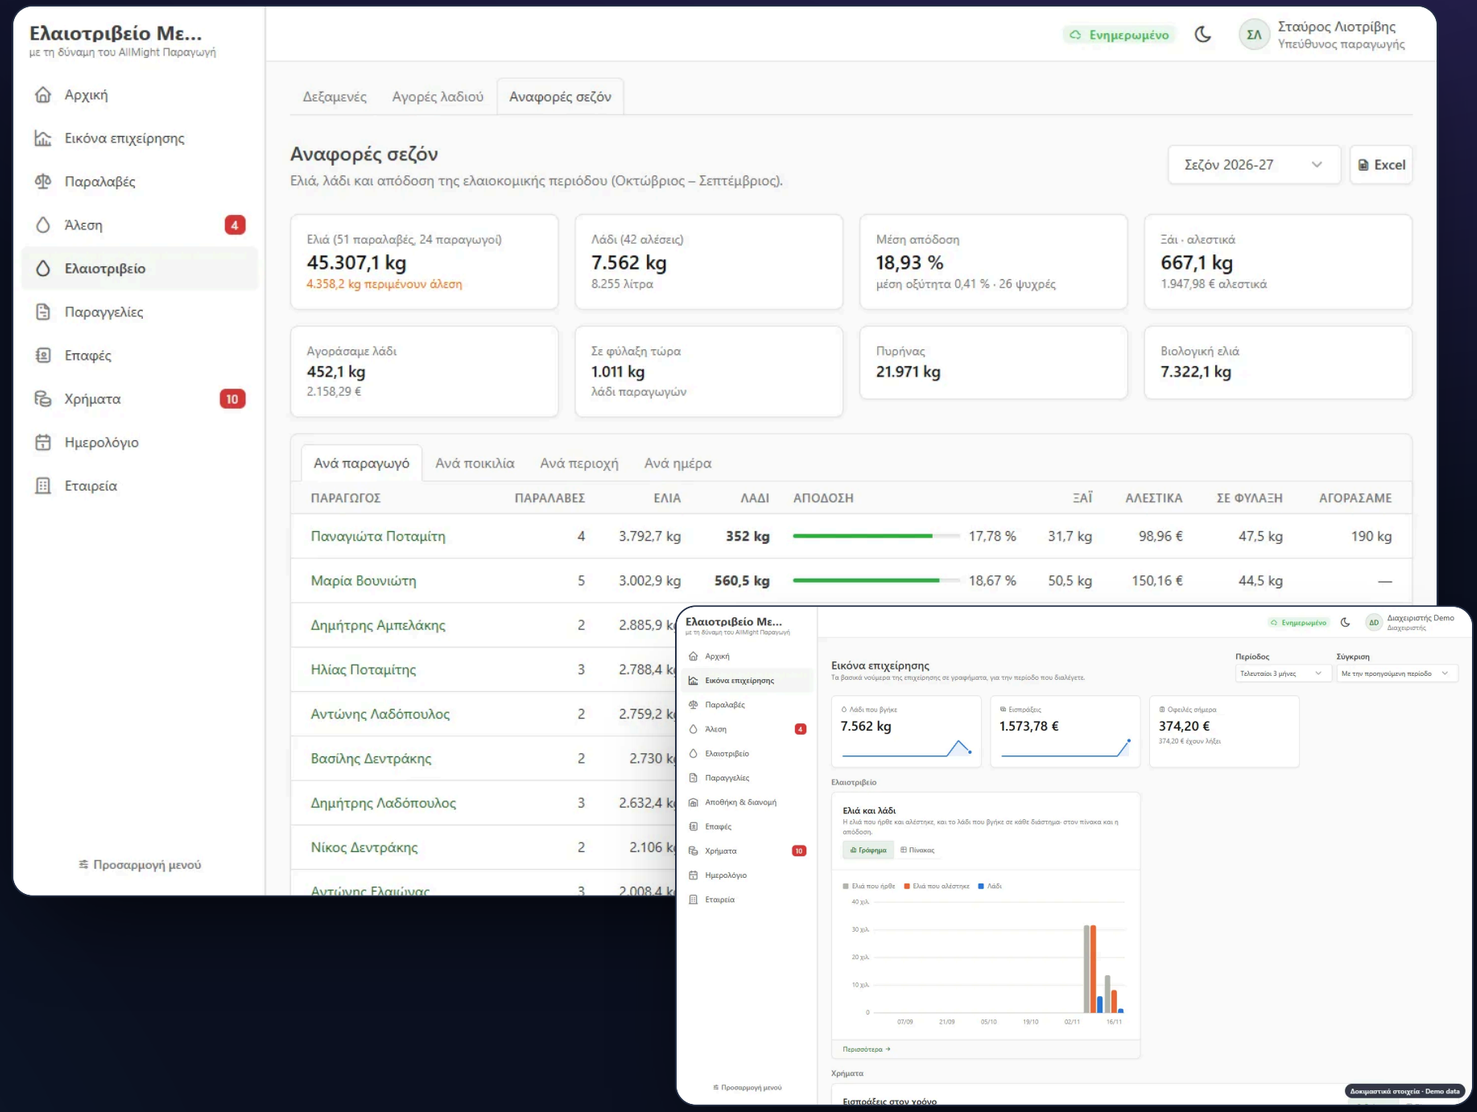

- ✓ Excel for the accountant
- ✓ The farmer's purchase paper as your accountant says

The season at a glance

The season’s olives, oil, toll, fees, purchases and pomace (October – September). Average yield per producer, variety, area and day, even in group millings. On the home page «Today at the mill» and every morning an email with yesterday’s numbers.

- ✓ Excel with everything for the accountant
- ✓ Charts per day, week or month

And also

Roles

Manager, scale, mill floor: each sees what they need, the floor without prices.

With the AllMight suite

The same producers, the same warehouse, shared payments, purchases and invoicing.

Numbering

Weigh tickets, millings, purchases and settlements in the shape you want.

Nothing to install

Opens in the browser on a computer, tablet or phone.

Let’s see it with your mill

A demonstration, your own producers and terms, and a trial before the season.

- ✓ Subscription per season or per year
- ✓ Works on computer, tablet and phone
- ✓ Nothing to install, it opens in the browser
