FOR BUSINESSES THAT TAKE MATERIALS AND MAKE PRODUCTS

AllMight Production

Food, drinks, workshops

by computerization4u

For the whole business

The recipe, the order, the materials that leave the warehouse and the products that come in, in one program. Every lot knows which materials and suppliers it was made from, which customers it went to, and what it cost.

The production manager

Writes the recipes, plans the week’s orders, sees what is missing and what each lot cost.

The floor

A tablet with big buttons: «Start», «Done», no prices, and without signal if need be.

Quality

Where every lot came from and where it went, a recall list in seconds, a label with a QR code.

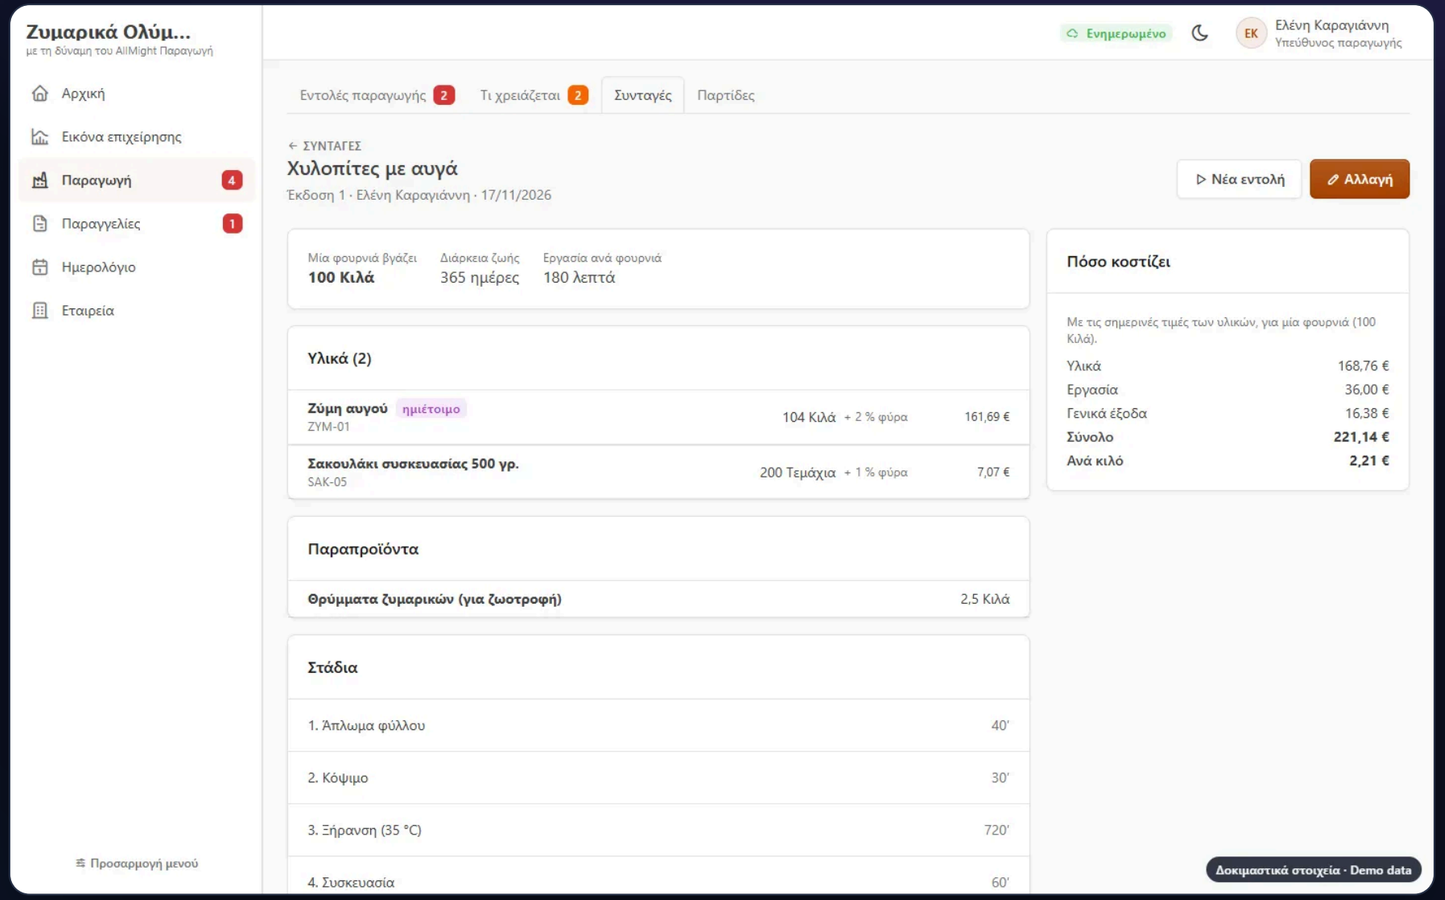

The owner

What was made, yield and waste, cost per kilo and margin, as charts.

Recipes with versions

For each product you write what one batch gives, the materials with their waste, the byproducts, the stages and the shelf life. A semi-finished item, such as dough, has its own recipe and goes into another one. When you change a recipe that was already used, it becomes a new version and the old one stays in the history.

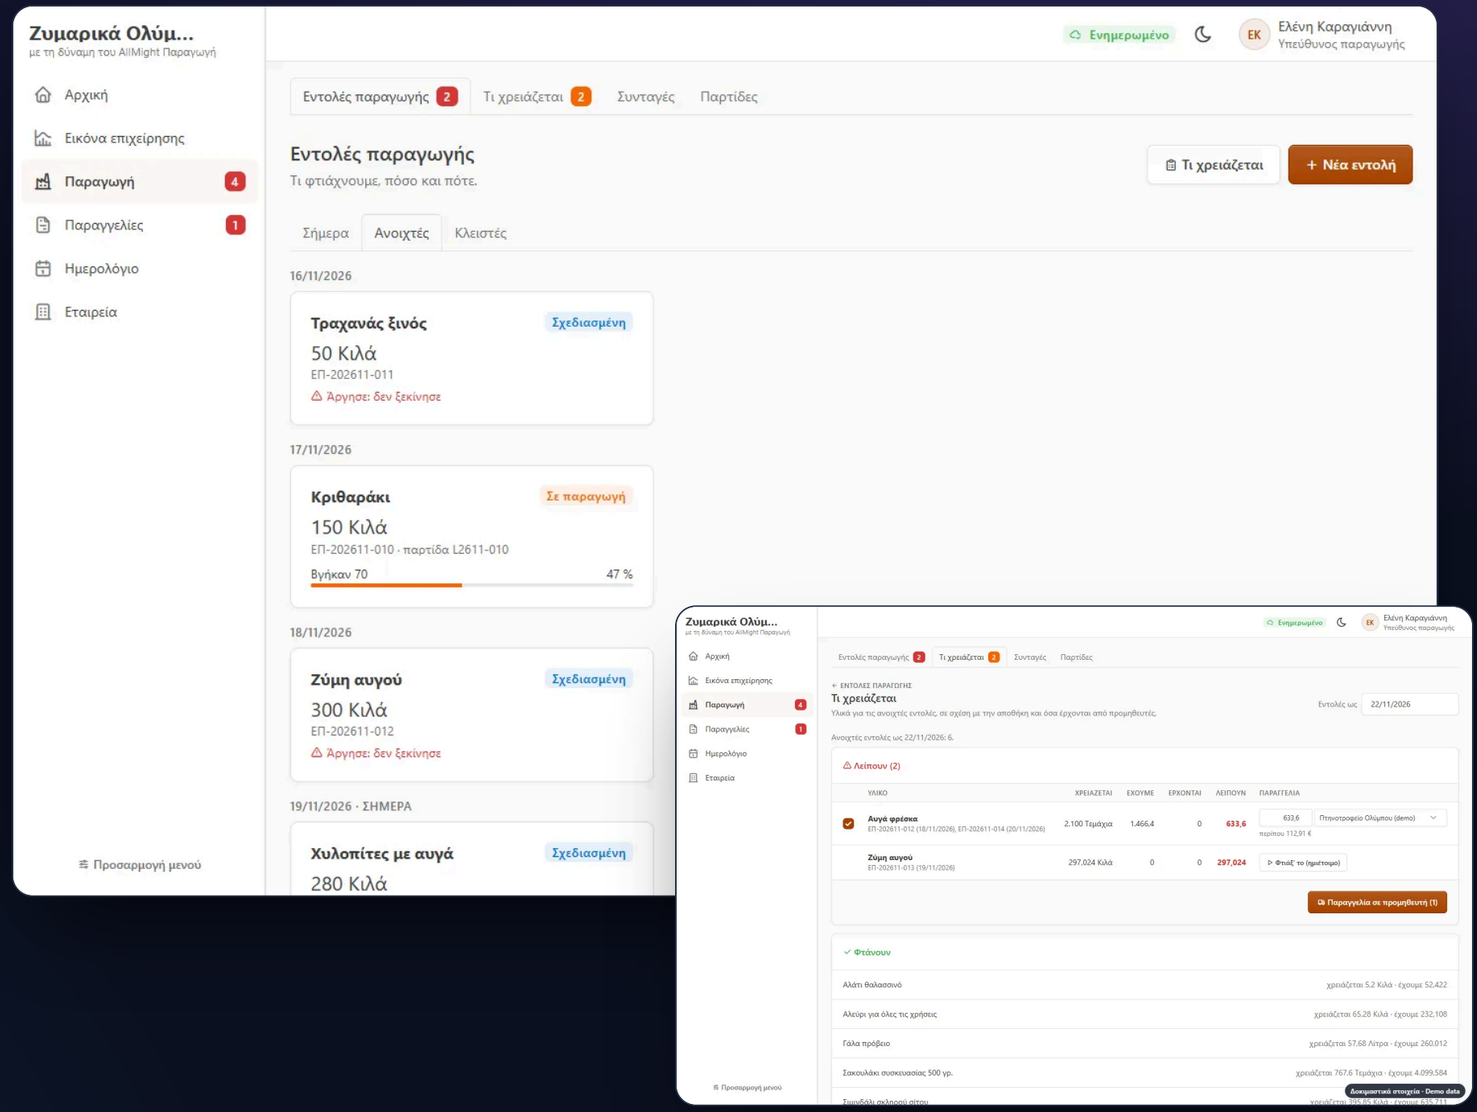

- ✓ «What does it cost» with today's prices of the materials
- ✓ Labour per batch and overheads in the cost
- ✓ Instructions and allergens in the recipe

Production orders and «What is needed»

An order says what, how much and on which day, and numbers itself. «What is needed» puts side by side the materials of the week's orders, what is on the shelf and what suppliers are bringing. For what is missing, one button makes the order to the supplier. From a customer's order, «Make it» opens an order for what the shelf does not cover.

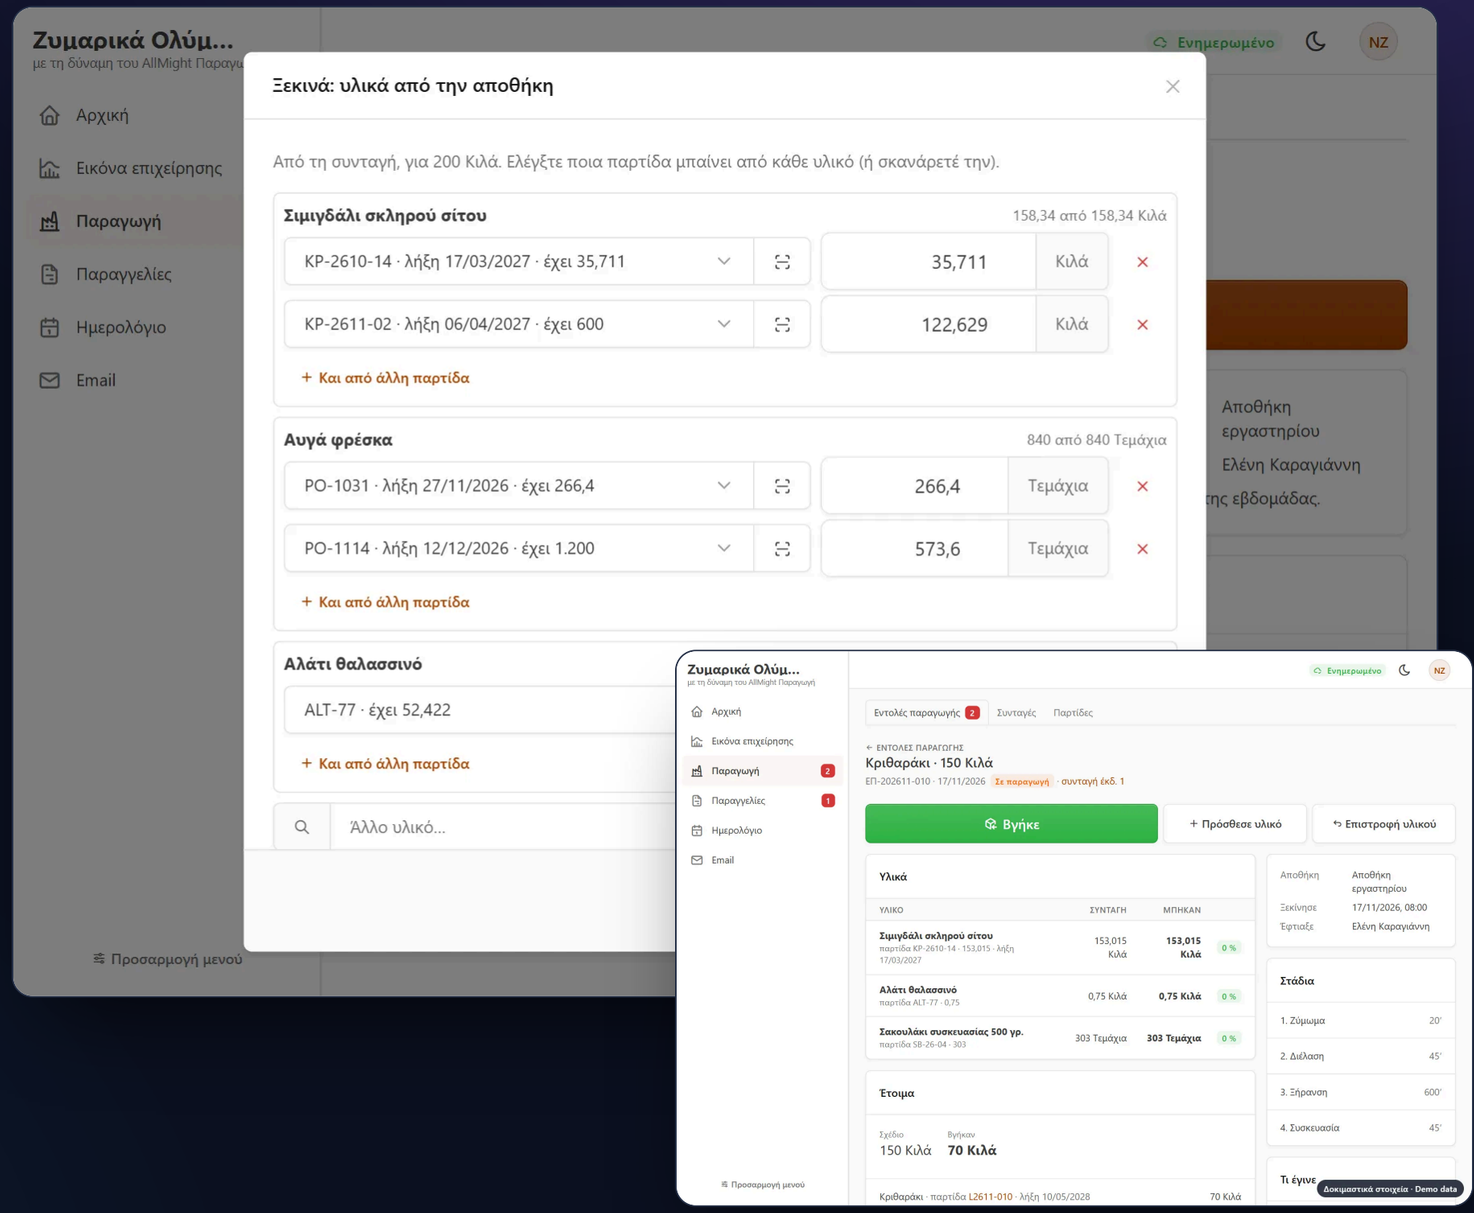

- ✓ Planned → In production → Done
- ✓ Orders in the shared calendar
- ✓ A number beside the menu for late orders and missing materials

The floor, on a tablet

Tap «Start» and the materials leave the warehouse, the lots that expire first first. The operator confirms or scans which lot goes in. At «Done» they write the real quantity: the product goes into a new lot with its expiry from the recipe, with the byproducts, and it can be done per shift.

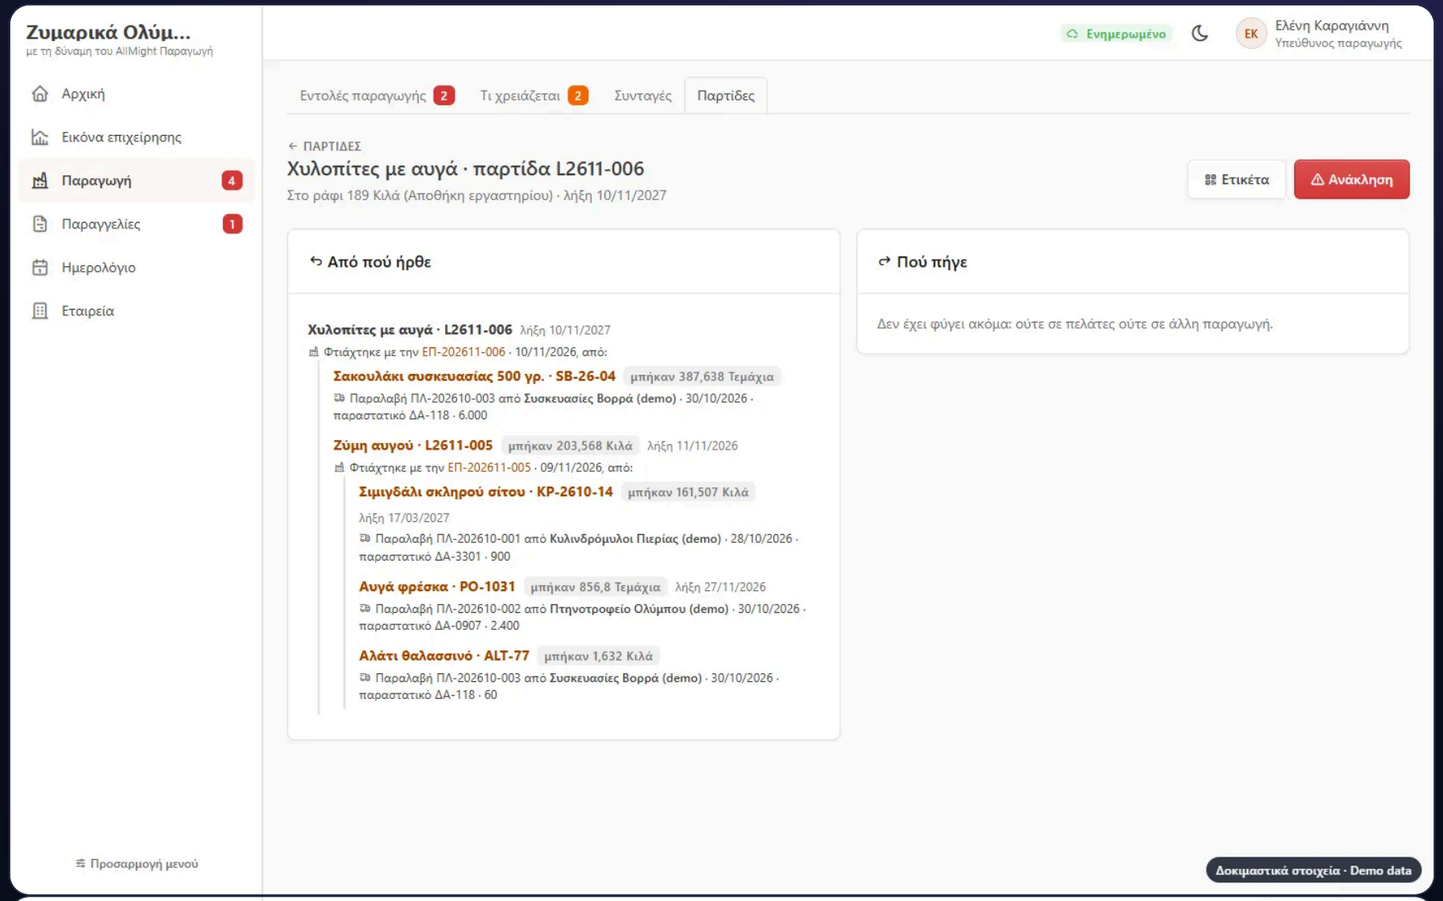

- ✓ Waste against the recipe shows in colour
- ✓ Add material, or give back what was left
- ✓ Works offline: everything is sent when the connection is back
- ✓ The operator sees no prices

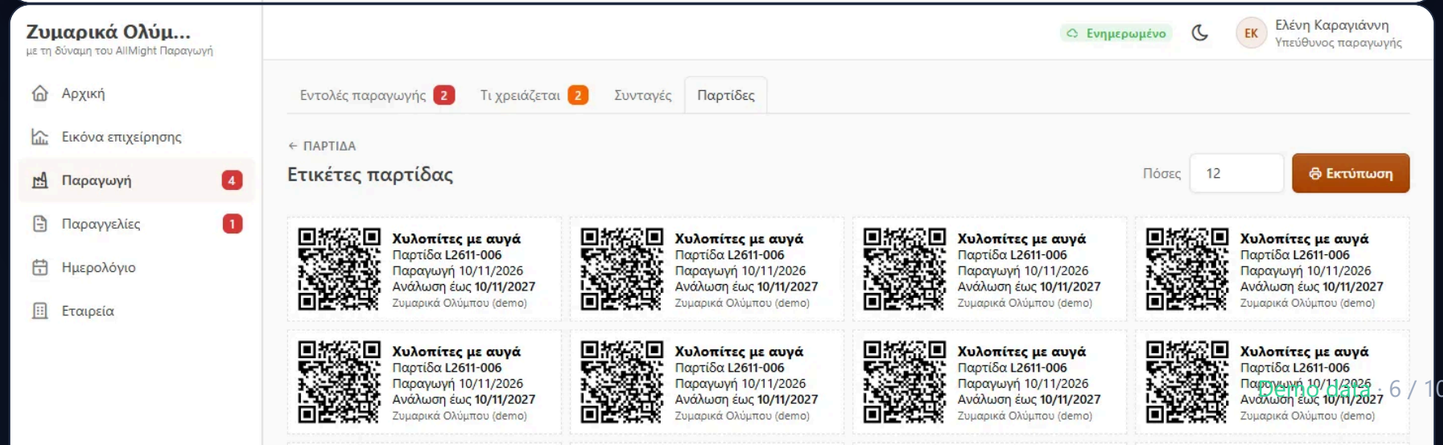

Traceability and recall

Every lot has its page: which material lots it was made from, which supplier and which document each came with, and which customers it went to. Starting from a material lot, the recall finds every product that contains it and every customer who got them, with phones and quantities.

- ✓ Recall list in Excel
- ✓ Lot labels with a QR code that opens its page
- ✓ Traceability is on or off per business: a workshop

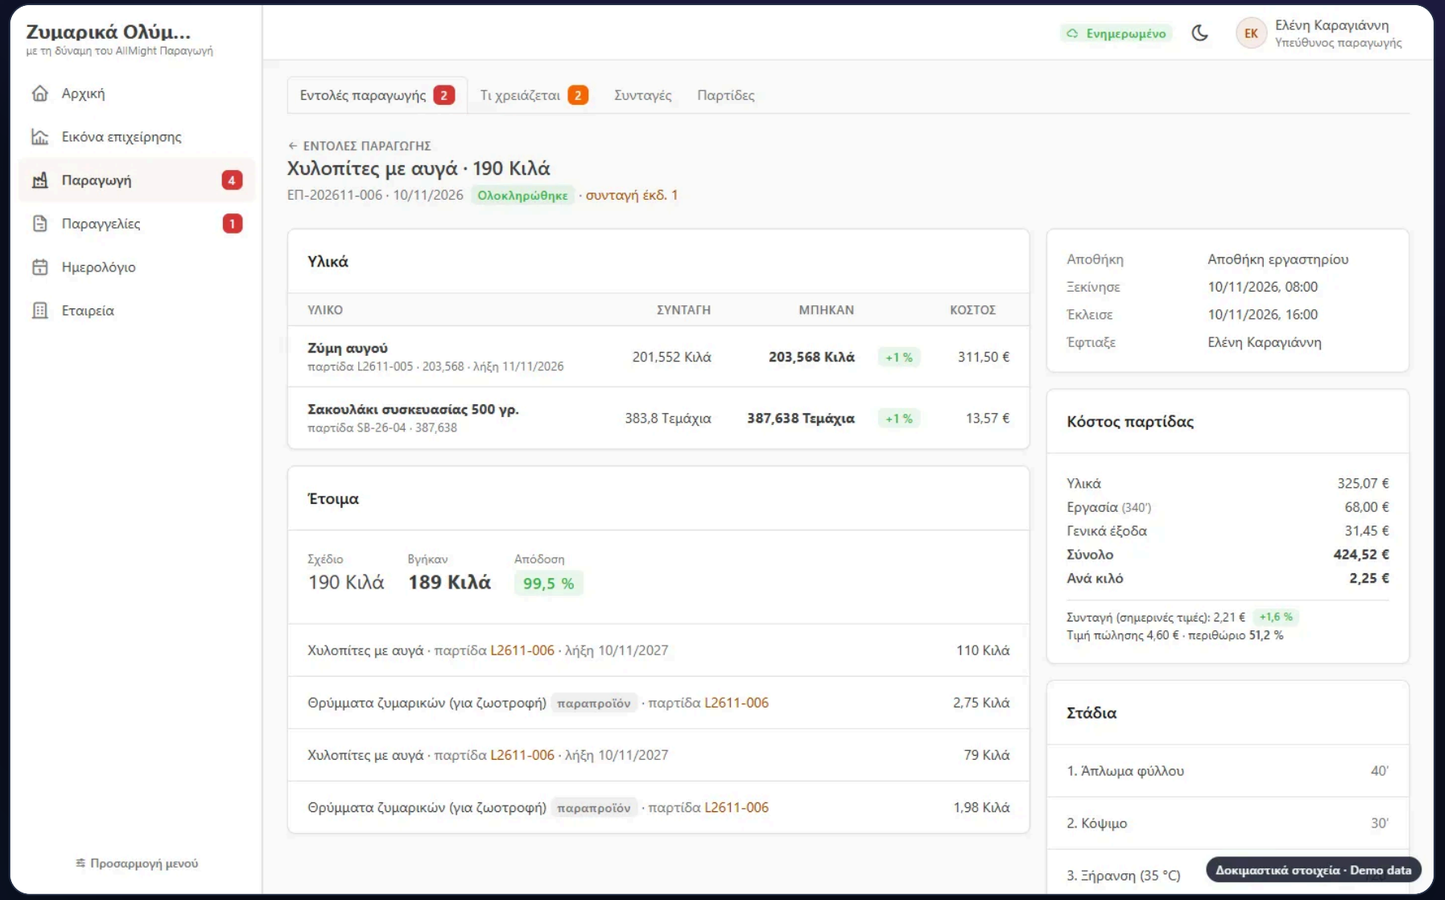

Lot cost

The real cost of the materials that went in, labour (from the recipe, corrected at «Done») and overheads give the cost per kilo or piece. Next to it, the recipe’s cost and the margin on the selling price. The cost goes on the lot, so the stock value and the profit of sales come out right.

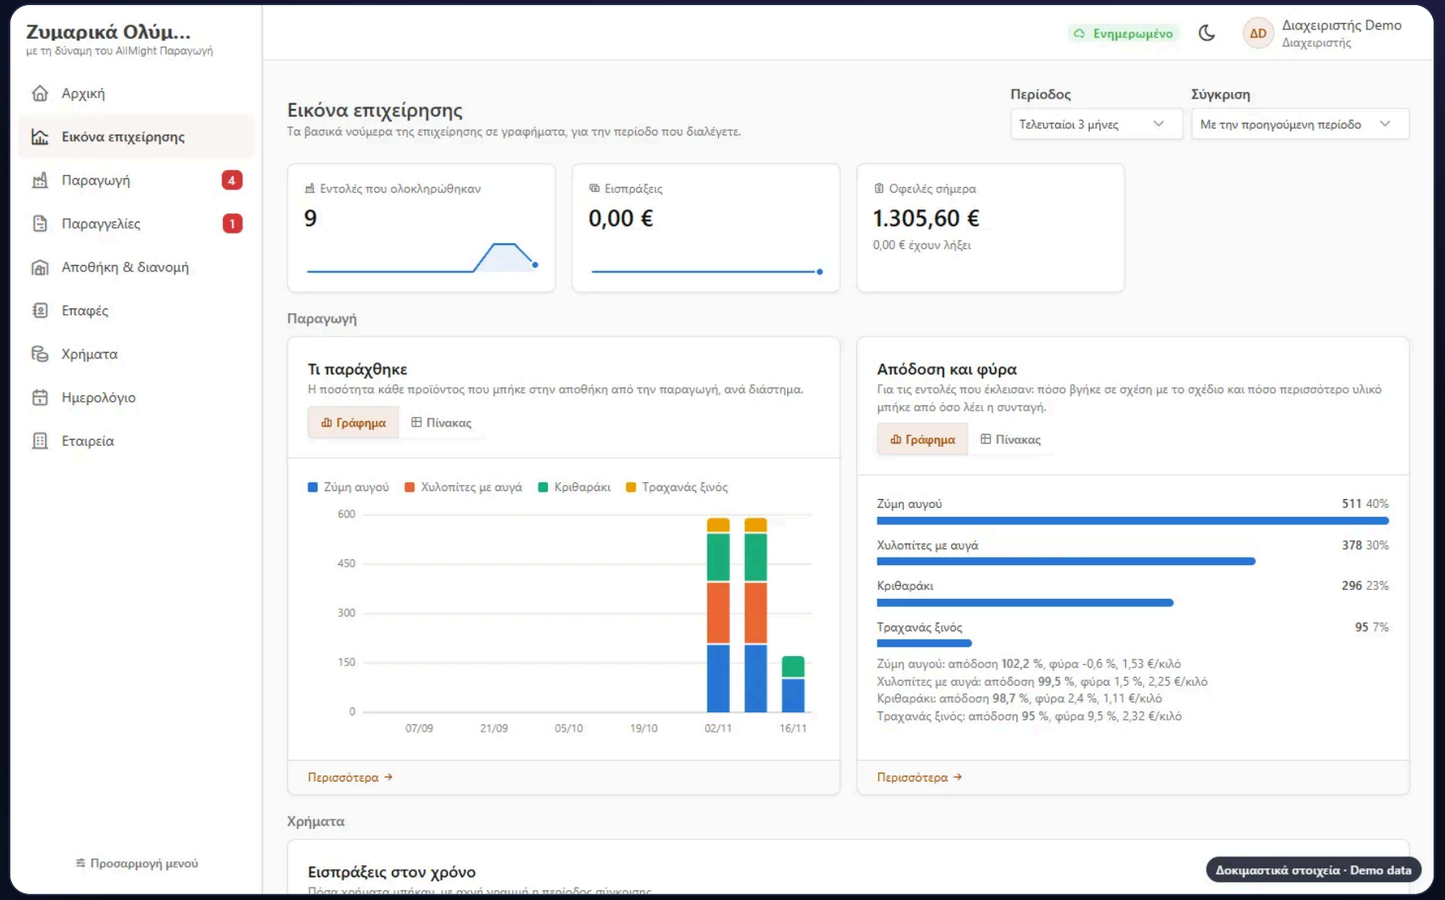

- ✓ Yield: what came out against the plan
- ✓ The cost stays as it was when the order closed
- ✓ Only the manager and the administrator see costs

Production at a glance

What was made per day, week or month and per product, yield and material waste, cost per unit, next to sales and money in. On the home page: «Today in production» and «Missing materials», and every morning an email with what needs attention.

- ✓ Every chart also as a table
- ✓ Compared with the period before or last year

And also

Roles

Production manager, operator, warehouse, sales: each sees what they need.

With the AllMight suite

The same items, the same warehouse and the same customers for production and sales, shared payments and invoicing.

No signal needed

The floor’s tablet records without a connection and sends later.

Numbering

Order and lot numbers in the shape you want.

Nothing to install

Opens in the browser on a computer, tablet or phone.

Let’s see it with your recipes

A demonstration, your own recipes and materials, and a trial period.

- ✓ Monthly subscription
- ✓ Works on computer, tablet and phone
- ✓ Nothing to install, it opens in the browser
